

XDS-RACU

Multi-projector system remote controller

The TREALITY® XDS-RACU makes it easy for you to control a multi-projector display system quickly, efficiently and securely – and from one central point. Through its easy touch or button interface, you can perform all necessary alignment and routine maintenance tasks. At a glance, you'll have a quick overview of your entire system's status.

Set all parameters

Compatible with most of the TREALITY® projector offering, the XDS-RACU allows you to define projector groups and calibrate all display parameters. This includes settings for color and brightness equalization, geometry correction and smearing reduction as well as time of day (TOD) settings to seamlessly transition from day to night training. In addition, its sleek, attractive styling makes it perfect for use in a simulator, virtual reality center or planetarium.

At the heart of system care

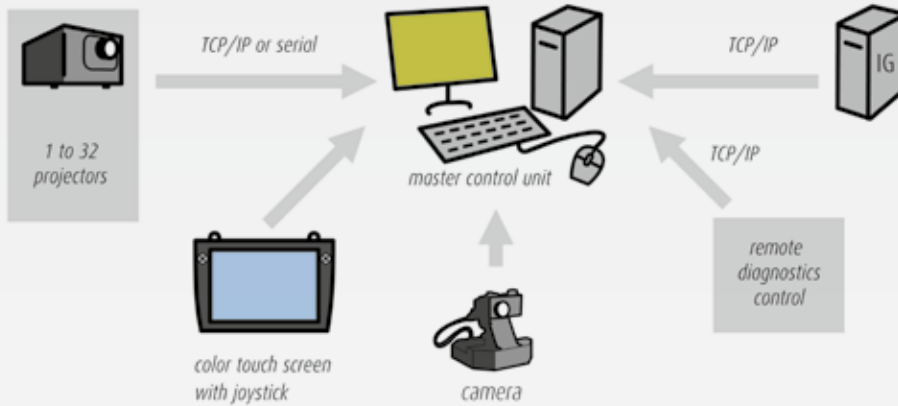

The XDS-RACU controller forms the heart of any modern realignment system, and in particular, the TREALITY® AutoAlign product suite. XDS-RACU is an integral part of the AutoAlign range, and was designed to work together with other products of the suite, which renders color calibration, brightness equalization, warping and blending much more efficient.

Full back-up

The TREALITY® XDS-RACU supports a full system back-up and diskless operation in high-security environments. The XDS-RACU automatically detects projector types and locations, and downloads its display parameters.

You can also store various control and projector parameters in a central location to considerably reduce MTTR or get back-up projectors running in no time, with all the settings of your previous system. As these settings are saved on your control unit as well as your projector, you effectively have a foolproof back-up.

Whether you need to control a single visualization environment or multiple display centers, the XDS-RACU gives you the power and flexibility to manage your visual system, unlike any tool on the market today.

Quickly download or upload all relevant settings

Manage groups and subgroups of projectors

Control all relevant image settings with one touch
